900 Wayzata.

Affectionately known as The Gateway to Wayzata, the steep grade and unusual parcel shape of the project site posed unique challenges regarding building placement. In collaboration with the owner, the design team successfully balanced pedestrian and vehicular flow and access while still maintaining a commercial anchor at a prominent corner of a bustling intersection. The campus of buildings was designed to stand the test of time through the selection of a streamlined color palette and traditional durable masonry materials. Outdoor spaces nestled in a variety of locations around the building provide commercial tenants and community members alike opportunities to appreciate Wayzata's charm and strong connection to the natural landscape.

930: New construction of a single-story steel and masonry bank branch office building of approximately 5,380 SF.

950: New construction of a two-story plus underground-level steel and masonry office building
